COM668 Assessment Overview - AT3 & AT4

Software Demonstration video and Project Review report

Overview

- Progress to-date
- AT3 Software Demonstration video
- AT4 Project Review report
- Assessment and Feedback

You are here

A quick look over your shoulder

Progress to-date

- ✓AT1 Project proposal agreed and approved
- ✓Agreed proposal submitted
- ✓BCS checks met
- ✓Ethics approval obtained
- ✓AT2 completed
- ✓AT3 coding in progress for product to be demonstrated
- ✓AT4 gathering evidence and other material to assist with report writing

Important note regarding changes to project

- Your project idea and intentions have probably evolved since the first semester
  - Perhaps due to a better understanding of what is feasible given the time available
  - Maybe due to emerging external constraints acting on what can be achieved, or how
  - Possibly the nature of the technical challenge has necessitated a change of goal

- Remember, minor changes are acceptable but significant changes need to be discussed

- Any significant deviation from the approved proposal must have fresh approval
  - This might include a new set of approval checks, e.g. a new ethics application
  - As such, significant changes can delay your progress

- You must check all deviations with your Mentor to ensure they are acceptable

Continued progress

- You are expected to continue to progress your project working a well managed manner
- Refer to the handbook for details of what is required, including a suggested pace
- Review the guidance lecture videos and slides for further support
- Discuss your project with your mentor, in group and individual meetings

AT3 Software Demonstration Video

Purpose, content and structure, and format

AT3 Software Demonstration Video - Purpose

- AT3 is a demonstration of the software your produced during the project
- Evidences that you have met a significant technical challenge
- Demonstrate major functionality of your software
- It also evidences your understanding and ownership of the underlying code
- Evidence of your learning to-date

- The handbook and your Mentor can provide guidance conducting a good demonstration

AT3 Video - Content and Structure

- Introduction
- Software demonstration
- Code walkthrough
- Conclusion

AT3 Introduction

- State you name and course
- State the aim of your project
- Overview the degree to which the aim was met

AT3 Software Demonstration

- Run the software
- Demonstrate the major features of the software
- Evidence the completeness of each feature
- Evidence correct operation of each feature, including effects on the underlying data
- Evidence robustness of each feature, using boundary inputs and interactions
- Discuss the evidence as you go
- Provide insight into the operation of the software
- You can verbally refer to your reports as needed but
  - Please do not show use any slides to present information
  - The focus must be on the software’s operation

AT3 Code Walkthrough

- Evidence your application of key computing concepts
- Overview the code, mentioning significant metrics,
  - e.g. lines of code, number of functions etc.
- Describe the tools used and the roles they play at a high-level
- Evidence your detailed understanding and ownership of the underlying source code
  - Show knowledge of the structure and function of the code
  - Display understanding of program code at a low-level
  - Highlight the significant challenges and achievements
  - Discuss example of important aspects, e.g. security and error handling
  - Discuss any issues encountered and how you resolved them

AT3 Conclusion

- Review how successful the work was at meeting the aim
- Review your main achievements
- Note anything you feel it is important to mention

AT3 Video Format

The format of the video must be in keeping with the guidance provided

- The video must be presented in a manner that allows assessment
- *Important audio requirements*
  - *You must provide commentary in English using your own natural voice*
  - *You must not use an artificially generated voice (unless you have a RAR)*
- *Important video requirements*
  - *You must include a video overlay in one corner that shows you presenting the work*
  - *You must be clearly identifiable, and it must be obvious that you are presenting the work*
  - *Take care that this insert does not obscure any of the material being demonstrated*
- Do not speed the video to make it fit the duration, this shows poor communications
- Please see the associated handbook sections for further guidance

Source Code Submission

- Submit all source files that you created or modified
- You are expected to submit all source code that will later be noted in the Code Manifest
- Ensure ownership of code is clearly indicated in comments
- If any code was generated using AI then this must be highlighted
- Submit the code as a single zip file, using the Blackboard link provided
- Keep the source code files in their original formats
- The code will be used to help examiners clarify content mentioned in other submissions
- Failure to supply the source code can impact the assessment of your project

AT4 Project Review Report

Purpose, content and structure, and format

AT4 Report - Purpose

- Assessment Task 4 (AT4) results in a technical report that details and discusses
  - Work undertaken during the project and the resulting outcomes
  - Details the design of the product
  - Reviews the software implementation plan, process, practice and tools
  - Details how verification, validation and testing were applied during the project
  - Evaluates the project outcomes, process and plan
  - Reflect on your learning during the project
- This lecture is a guide to a typical AT4 Project Review report
- You might want to adapt this to your specific project
- Your Mentor will be able to guide you further about how to do so

AT4 Report Content and Structure

- Title page
- Contents
- Software Realisation
- Quality Assurance
- Critical Appraisal
- References
- Appendices (including required *Code Manifest*)

AT4 Title Page

- Project title
- Student name
- Student ID number (B00…)
- Course Title
- Year of submission
- PSG identifier (PSG-…)
- Mentor name
- Word count, self declared by the student
- Student Declaration of Ownership

Important note regarding maximum word counts

- Ulster University has updated its policy on maximum word counts
  - Students must self declared the word count for a submission
  - Work under the word limit is less likely to fully meet assessment criteria
  - There is flexibility up to 10% over the stated maximum word limit
  - Work will only be considered and marked up to that point
  - A falsified word count may be considered as academic misconduct

- During COM668, the maximum word counts exclude:
  - Title page, Contents, Reference lists, Tables, Appendices
- Everything else counts towards the word count

- Further guidance on word counts is available in the handbook

Important note regarding Student Declaration of Ownership

- Ulster University has updated its policy on academic integrity
  - Details have been made available to students by the University
  - It is important that you read and understand the policy
  - There is a new *Student Declaration of Ownership* that must be stated in submissions

"I declare that this is all my own work. Any material I have referred to has been accurately referenced and any contribution of Artificial Intelligence technology has been fully acknowledged. I understand the importance of academic integrity and have read and understood the University's General Regulation: Student Academic Integrity and the Academic Misconduct Procedure. I understand that I must not upload my work before, during or after submission to any unapproved plagiarism detectors or answer sharing platforms, or equivalent, and that only University-approved platforms should be used."

- Further guidance on academic integrity available on the University's website

AT4 Contents

- Structured contents section
- Presents document structure
- Include page numbers
- Consider automating this in your editing tool

AT4 Software Realisation

- Implementation review, inc. rational for decisions
  - Challenges and achievement during implementation
  - Changes made, why were they made, and how they were managed

- Review tool use that supported the development process
  - Processes used during implementation
  - Tools used to support those processes and implementation in general

AT4 Quality Assurance

- Description of verification and validation activities
  - How you ensured you the software would meet the specifications and designs
  - How you ensured you software would address the aim of the project

- Testing
  - Describe the testing strategy employed and how it was managed
  - Define the tests used during the various stages of development
  - Detail the results from testing

AT4 Critical Appraisal

- Evaluation of project outcomes
  - What was achieved and what helped to achieve them
  - What was not achieved and why and what could have been done differently
- Review of plans and any deviations
  - What plans were established
  - What deviations occurred, why, and how were they managed
- Evaluation of methodology
  - What methodology was used and how did it support project delivery
  - Was it the right approach, and if not what might have been
- Personal Development
  - What have you learned
  - What personal development might you take forward from the project

AT4 References

- All sources must be cited within the body of the report
- The reference list should provide full references for all items cited.
- All references should be in the Harvard style
- Acknowledge any use of Artificial Intelligence (AI)
- Ensure your practice meets the University’s academic integrity policy requirements

AT4 Appendices

- Code Manifest (required item)
  - A table that identifies the source code files you created or modified, and their purpose
  - *States the name of the file, the nature of your contribution, and the purpose of the file*
  - *These should be the files submitted previously within the source code submission*
  - *All use of AI to create or modify code must be detailed in the Code Manifest*

- Any additional lengthy items can be placed in an appendix
  - For example, full lists of requirements, further designs, additional tables, etc.
  - However, include a few representative items in the report body to aid discussion

- Organise appendices so you can refer to them in the main body of the report
  - Typically, put different types of material in separate appendices
  - For example, *"Appendix C - Test Results"*

Report format

- The report must be written and presented in a manner that allows assessment
- It should be formatted in keeping with the advice provided in the handbook
- The submitted file should follow the naming requirements and be submitted in PDF
- Full details are given in the handbook

AT3 and AT4 Assessment & Feedback

Evidence based assessment

AT3 and AT4 Assessment considerations

- The format of the video and report must be in keeping with the guidance provided
- They must be presented in a manner that allows assessment
- Please see the associated handbook sections for further guidance

Important note regarding Academic Misconduct

- Ulster University has updated its policy on academic integrity
  - Details have been made available to students by the University
  - It is important that you read and understand the policy

- Proper citation and referencing is critical
  - Failure to properly acknowledge the work of others is academic misconduct
  - Failure to properly acknowledge use of AI is academic misconduct
  - Academic misconduct offences can result in you failing the associated piece of work.

- If in doubt about any aspect of this, consult the resources the University has provided and discuss them with your Mentor

- Further guidance on academic integrity available on the University’s website

Assessment - AT3 Demonstration Video

- Maximum duration is 15 minutes
- AT3 is assessed at 25% of the module
- It is a required deliverable and must be submitted to pass the module
- Assessment is agreed by your Mentor and your allocated marker
- The handbook has details of the what is expected, including a marking rubric

Assessment Criteria	Marks
Functional Walkthrough	45%
Code Walkthrough	50%
Communication	5%

Assessment - AT4 Project Review Report

- Maximum word count 2400 words
- AT4 is assessed at 30% of the module
- It is a required deliverable and must be submitted to pass the module
- Assessment is agreed by your Mentor and your allocated marker
- The handbook has details of the what is expected, including a marking rubric

Assessment Criteria	Marks
Software Realisation	25%
Quality Assurance	30%
Critical Appraisal	40%
Communication	5%

Feedback

- Written feedback is agreed by your Mentor and your Marker
- Feedback will be returned within 20 working days, in keeping with University policy
- On receipt, arrange a meeting with your Mentor to discuss your performance
- All marks and feedback are communicated on Blackboard

COM668 Assessment Overview - AT3 & AT4

Any questions?
